RESTRICTED - EYES ONLY

GENEP54 INCIDENT REPORT

DEPARTMENT OF BIOLOGICAL ANOMALIES
FILE ID: GP54-01 | **DATE:** 1962
CLEARANCE: LEVEL 4 (INTERNAL USE ONLY)
STATUS: PARTIALLY DECLASSIFIED PER ORDER 77-B

SECTION 1 — INITIAL SITE INVESTIGATION: FARMLAND ANOMALY

Following the 1947 Roswell event and subsequent Henry Halden cover-up, military intelligence identified a primary GENEP54 subject. Initial reports of "crop circles" and "ufo landing sites" were confirmed to be the result of uncontrolled **pyrokinetic discharge** from a human biological source.

- Aerial reconnaissance reveals precise carbonization patterns consistent with 3000°F bursts.
- Witness accounts of "glowing spheres" recontextualized as subject thermal radiation.

SECTION 2 — THE SOLAR CATALYST THEORY

Advanced biopsy and observation of captured GENEP54 subjects reveal a unique **Photosensitive Cellular Reaction**. Unlike baseline humans, GENEP54 mutants utilize the sun as a primary energetic source.

SOLAR ABSORPTION: Dermal cells act as high-efficiency photovoltaic receptors.

POWER SCALING: Manifestations (pyrokinesis, resilience) peak during peak ultraviolet exposure hours.

DORMANCY: Significant depletion of manifestations observed during extended subterranean or nocturnal confinement.

SECTION 3 — RECLASSIFICATION PROTOCOLS

All sightings previously attributed to extraterrestrial involvement are to be re-vetted against the GENEP54 Subject Manifest. The "Roswell Incident" is officially re-interpreted as a failure in containment of a high-yield pyrokinetic individual, not a crashed vessel.

SECTION 4 — SUMMARY OF MUTATION CATEGORIES

- **Pyrokinesis:** Spontaneous combustion and heat manipulation.
- **Solar Resilience:** Accelerated healing and strength under direct sunlight.
- **Sensory Adaptation:** Enhanced perception in high-light environments.
